The People of Greece

The Legend

When God was building the earth, he lavished all goods such as water, pasture, forests, and rich soil on the countries of the world. Then suddenly he remembered that he had forgotten Greece. What could he give to this country since he had given all the riches to the others? He started stroking his beard thoughtfully. All at once an idea struck him when he saw the rainbow hanging over his head. Reaching up, he chopped a piece off, stooped and picked up a little soil and many stones, and kneaded the whole thing together in the palm of his hand. Then, opening his palm, he blew the mixture into the sea, and Greece came into being.[1]

In its symbolic meaning, the rainbow of the legend is the Greek people who are as colorful as the sun-drenched rocks on which their nation grew to greatness.

The fact that the Athenian civilization with its poets, philosophers, dramatists, and sculptors had its origin in a city of less than two hundred thousand people on the rocky Attic plain has been a source of wonder to all who know anything of ancient Greece. But today there is also a miracle of Greece at which to wonder. In our twentieth century we see a land of 51,182 square miles supporting eight million people; that is, an area the

size of Alabama supports more than twice that state's population. But Greece has considerably less economic wealth. For instance, only about 25 percent of the land is arable. We see a people which in a fifty-year period has been able to survive five wars, including an exhausting civil war, at least two catastrophic population displacements, several violent earthquakes, and chronic droughts. Although it is a long span between Periclean Athens and the Greece which is the keystone of the Eastern Mediterranean NATO group, the Greeks, despite their repeated crises, seem to have gained in the strength to keep alive their vital spirit.

Every Greek stands out so distinctly as an individual that he defies easy location along the social spectrum. Is it the fierceness of the struggle to survive that has produced the sharply outlined individualism of the Greeks? Despite these marked individual differences, the Greeks can be sorted into three general groupings: the city Greeks, the seafaring Greeks, and the rural Greeks.[2] Each group, though sharing much in common, has a somewhat different orientation in its style of life. Each still depends upon the other two for the realization of its national destiny, and each adds its own color to the rainbow quality of contemporary Greek society.

The largest group, and the one least known, is that of the rural Greeks, the chief subject of this book. But this group cannot be understood out of its social context or without sketching in the outlines of the other two groups — the Greeks who live in cities and the Greeks who live by and on the sea.

The City Greek

Greek history shows that the Greek has traditionally been a child of the city. In antiquity he developed the city-state and he colonized through cities, not through the homestead on some developing frontier. Today, two thousand years later, Greek peasants coming to America directly from a village take up a trade in a city with much greater alacrity than they take up farming.[6] Behind this feeling at home in the city, which seems to exist in most Greeks (but most strongly, of course, in the settled urban classes), there is a fact of historic importance: the Greeks learned early that the city had a social organization all its own and that from the city radiated lines of economic, political, and religious authority. They knew that those who understood the city could manipulate these lines.[6] Thus armed, they were able to keep in advance of their neighbors to such an extent that, when the semi-nomadic Turks captured the Greek capital (Constantinople) in 1453, the conquered Greeks quickly moved into places of prominence and power in the conqueror's regime. Consequently, the Greeks through the years have become increasingly experienced in the arts of social administration and economic dealing in an urban setting. Every event or possible event had its "angle" to be weighed judiciously and then energetically exploited.

someone like Arnold Toynbee that Greece's early greatness grew out of the stern necessity to respond to the challenge of a partly hostile environment and a population growing beyond its means of subsistence. 182

Although the study of Greece's past shows that the cultural, or man-made, aspects of life have been tremendously important, one must nevertheless give the physical environment its just due. This leads to a consideration of some of the cold, hard facts about the rock that is Greece.

The Regions of Greece

Each of the regions of Greece, shown on the accompanying map, has its own assortment of mountains, plains, and a stretch of coastline; each has its own history and traditions; each has its own problems posed by the 101 13

Like many of the older agricultural areas of the world, this area is densely populated and now has far more people than its depleted resources can adequately support. . . . At the present time, nearly 10,000 people are attempting to support themselves on 25,000 hectares (62,500 acres) of land, some of it waterlogged, most of it eroded, and all of it reduced in productivity.[9]

Yet this population pressure is of relatively recent occurrence. One writer in 1842 described the large amount of land then available in the Greece which at that time consisted of the Peloponnesos and Central Greece:

The industry of the 100,000 persons engaged in agriculture is almost completely lost to view in the extensive wilds of Greece; and the universal remark of tourists is, "What a pity that the cultivation of the soil is so neglected! what a rich and fertile country! what myriads of colonists might prosper here!"[10]

What happened between 1842 and 1952 to change the population picture so drastically? The population of Greece grew not only by natural increase but by the acquisition of new territory. The story can be told most simply by figures contained in the United Nations' *Demographic Yearbook* for 1952; in 1861 there were 60 people per square mile in what was then Greece; in 1951 there were 149 people per square mile in what is Greece today.

Students of population remind us quite properly that mere density per square mile is not a safe guide to the actual or the potential standard of living. The highly industrialized areas of Western Europe support several times the density of Greece and their people have many more modern conveniences. In a rural country, the density in terms of arable land is a more revealing indication of living conditions.

In the United States there are 17 acres of arable land for each farm person, but in both Greece and India there are only 1.3 acres. Our major farm problems come from surpluses; Greece, too, has her surpluses, although, like most countries moving away from a peasant economy, she is deficient in certain food supplies. One ray of hope for the less-privileged countries is the possibility that they may increase production per acre from 13 to 14 bushels (the present grain yields in Greece) closer to 30 bushels, a figure surpassed by the United Kingdom, Denmark, and the Netherlands, where scientific agriculture is practiced. But even here basic soil types set certain limits.

The present situation seems likely to become even more acute. In Greece between 1951 and 1961 there was a population increase of 9 percent, a figure which may grow larger if death rates are lowered faster than birth rates. Without a rapidly expanding economy to absorb these added people into productive jobs, the Greeks will feel their economic limitations even

The Greeks have a story that when God made the world he put the earth through a sieve and used the soil to make the different countries; but the stones that were left in the sieve he threw over his shoulder, and they became Greece.[1] The land is so mountainous, precipitous and stony that out of the 50,100 square miles that constitute the area of Greece, only 25 per cent are usable as fields, orchards and pastures.[2] Yet on this land, out of a population of 7,335,675, according to 1940 figures, 60 per cent are directly engaged in agriculture, and another 15 per cent cater to the needs of the farmers.[3] This condition, as well as a growing population, is basic to the need for technical change in Greece. Through more than 2,500 years, Greece solved the problem of increasing population on limited land by sending out her people as colonists or immigrants. In the first two decades of this century, emigration to the United States provided the main solution. Early in the 1920s' two things took place which combined to make the population problem acute; the United States passed a law under which a quota was applied to immigrants, which limited drastically the number of Greeks who could thereafter enter the country; and the exchange of populations with Turkey, which increased the population of Greece suddenly by more than a fourth. Since then, the population figures from 1928 to 1940 indicate an annual increase of 1.5 per cent.[4] The traditional ways of farming and the traditional crops cannot support this growing population, even in terms of sheer subsistence. Change must be introduced at the very roots of the economy, striking at the relationship of man to the land and of man to his work, which is a close and meaningful one to the Greeks. How to do this without destroying the meaning of life is the question facing those entrusted with the introduction of change into this culture.

We give here a report of the basic structure, tenets, and attitudes of Greek culture which should be considered in applying change.

Greece has been undergoing induced change for several decades now. Before 1920, the centralization of political and civil affairs effected profound and permeating change in village communities which had been used to self-regulation, and where a prominent farmer spent his entire fortune to build a village school, or a schoolteacher, on hearing of the appearance of the enemy in the vicinity, could, on his own initiative, pass out arms and lead his pupils to battle. After the exchange of populations with Turkey in 1922, the Near East Foundation, helping to rehabilitate the refugees, also undertook to introduce changes in sanitation, child care and the standard of living generally. Changes in the areas of agriculture and health were
